BLOCK DIAGRAM

METHOD OF ADJUSTMENTS

Schematic diagram of alignment points and meter connections.

1. Put the controls into the following positions:

POWER:

OFF

A SPEAKER SYSTEM

SPEAKERS: VOLUME:

-∞ dB (())

DIRECT COUPLE:

ON SUBSONIC FILTER: OFF

OPERATION:

CLASS-B

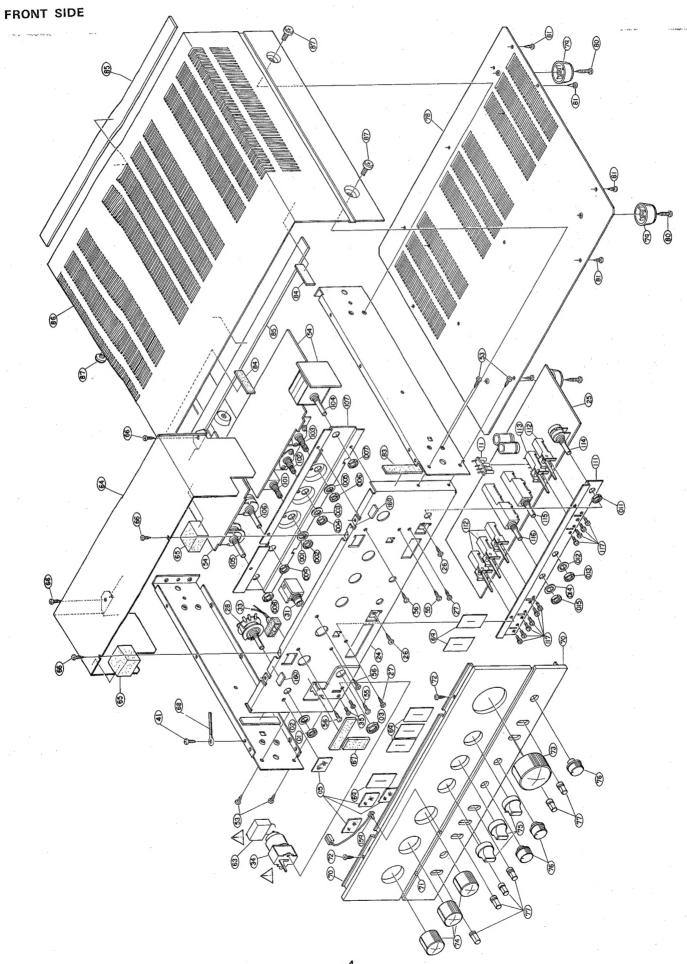

- 2. Shape the varisters D27 and 28 on PUX-023 (power amplifier board) into D29 and 30 as shown in the above diagram and insert them into power radiator holes.
- 3. Connect a DC voltmeter between the A speaker terminals and another between the power amplifier board test points. (see the above diagram)
- 4. Put the power switch on and do the following preliminary adjustments immediately.
 - Adjust the speaker terminal voltage to 0 ± 10mV at VR3 (L-channel) and VR4 (R-channel) on PUX-023 (power amplifier board).
 - Put SUBSONIC FILTER on, and adjust the speaker terminal voltage to 0 ± 10mV at VRI (L-channel) and VR2 (2)(R-channel). Switch SUBSONIC FILTER off after adjustment.
 - Adjust the voltage between the test points (24) (+) and (25) (-) ((49) (50)) to 7 ± 1mV at VR5 (L-channel) and (3)VR6 (R-channel).
- 5. Make the following adjustments quickly three minutes after switching POWER on.
 - Do the adjustments in 4-(1) and 4-(2) above again. (1)
 - Adjust the inter-test point voltage to 9 ± 0.5mV at VR5 and VR6.
- 6. Switch OPERATION control to CLASS-A, and adjust preliminarily the inter-test point voltage to 270 ± 10mV at VR7 and VR8. After three minutes of aging following the turning of OPERATION switch to CLASS-A, adjust the inter-test point voltage to 280 ± 5mV.

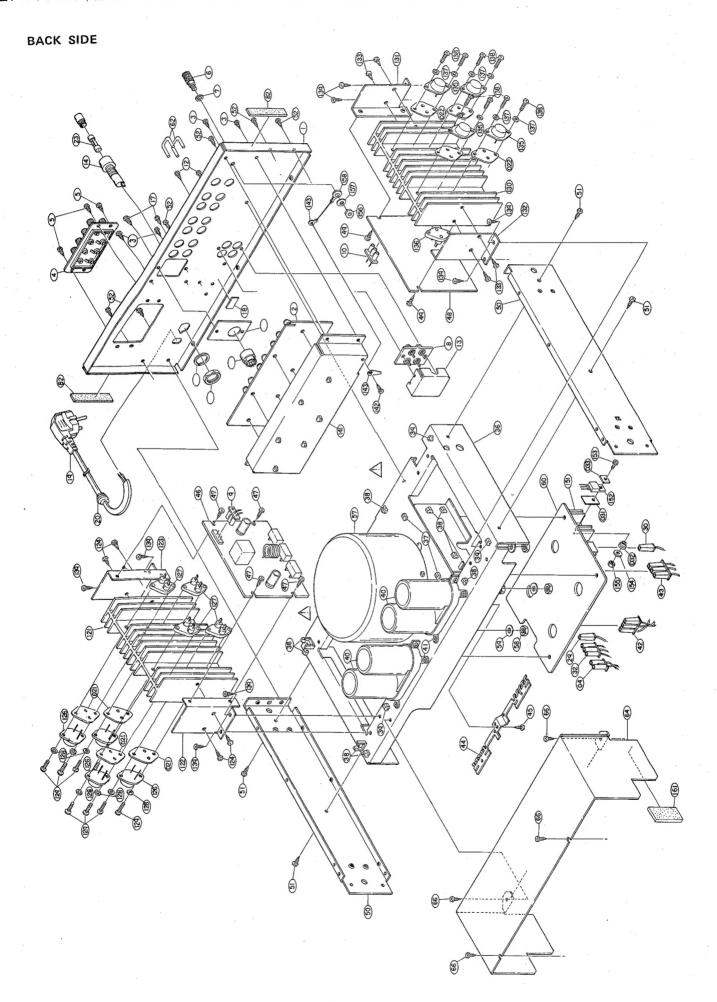

NOTE: Adjustments should be made while the unit is on in its normal position, and at a place not too airy.

REPAIR SERVICE INSTRUCTIONS

- 1. In repairing the power source section and power amplifier section, first discharge the four C102-105 of 10,000µF/63V on the (68) main chassis through a resistance of 220Ω - $1K\Omega$ (2W or more).
- 2. The controls on the upper area of the front chassis (speaker-selector switch, treble volume, bass volume, tape nomitor switch, input switch, phono input switch, volume controller) can be taken off without removing the front panel, by removing the knobs and the nuts.
- 3. In replacing a power transistor, insert a new one while fixing by hand the transistor socket because the socket is not fixed to the power radiator. By turning the pan-head screws (129) and (138), the power transistor and the transistor socket will be fixed in a manner they hold the power radiator in between.
- 4. In repairing the power amplifier section, make sure varisters D29 and D30 are inserted into the holes of the power radiator.
- 5. In removing the R-channel (48) power amplifier board from the main chassis, also remove part of the back panel from the main chassis.
